2011

Launched Legado

Combined scientific exploration, discovery, and community outreach on Namuli via two rapid assessments on the massif — both facilitated by technical climbing.

NAMULI = PRIORITY

Secured Namuli's designation as a priority for conservation in the government's national biodiversity strategy.

2015

Hosted 33 international Legado Fellows in Mozambique for a two-week integrated, multidisciplinary training to cultivate a dynamic approach to conservation, science, economic development, and leadership.

Shared, Namuli, the film, across nine countries at over 34 stages from the Banff Film Festival in Banff, Canada, to the Africa International Film Festival in Lagos, Nigeria.

Completed the first ever Participatory Rural Appraisal, a survey of all of Namuli's communities and its 12,000 residents about the state of their lives and their mountain.

2017

Fostered partnerships with all community leaders to work with Legado to develop a conservation agreement. The conservation agreement will detail each community's commitment to conserving key biodiversity areas and ecosystem services and Legado's commitment to providing socio-economic development programs to each community.
